

Erosion

侵蝕

This term the grade four students learned all about erosion. They learned the causes of erosion, and also how to stop it. They understand the problems that erosion can cause.

They modeled a landslide and could see first-hand, the effects erosion has on a hill and the buildings on the hill, when the soil is not protected against erosion.

For the project, the students need to design riverbank reinforcements that would prevent erosion. We have completed the ‘planning’ phase of the project and are now looking forward to building and testing the reinforcements, next term.

四年級學生上半學期學習關於「水土流失」。他們探究其原因及影響，並思考如何保護大自然，防止水土流失。

當學生打造一個山坡模型，並觀察當山坡的土壤沒有做好水土流失的防範時，此山坡及蓋在山坡上的建築物會有什麼改變。

在「強化河堤」的專題中，學生已完成「計畫」階段，思考如何強化河堤避免水土流失。期中考後將進入大家期待的下一階段—實作與測試。
