

# All About Plants!

認識植物

This term, the grade ones have been learning how to identify living things. They know that living things have certain needs and that they grow.

一年級學生這學期在康橋未來技能課程中探討生物的基礎概念，並了解生物皆有特定的需要，且有不同成長階段。

They were able to apply this understanding to show how plants are living and that they have needs too. The students observed how bean seeds grew over several weeks if we made sure that it had water, air, sun and space.

學生能夠運用此概念，思考植物的生命所需。在短短幾週之內，藉由觀察豆子的生長，他們發現植物所需要的是「水、空氣、太陽、及空間」。
